CS306 Project Step 5

Here are the screenshots of the admin page and client page of support part.

Admin Support:

Client Page:

In this step, mainly we followed the steps of the pdf given in recitation folder. So, we started with downloading the composer, then we continued with linking our database from firebase. We entered the project settings, then downloaded JSON file. We imported the JSON file to our project and included our firebase link (db_firebase.php).

Our admin chat is similar to the client chat, we just changed is just the sender field.

This is our firebase link: <https://cs306-b1a4e-default-rtdb.firebaseio.com/>
